

Django Social Login with Allauth (Twitter & GitHub)

A Django web app that implements secure and user-friendly social login using Django-Allauth, integrated with Twitter and GitHub. This project demonstrates industry-standard authentication practices and is ideal for scalable, OAuth-compliant user management.

Features:

- Social login with Twitter and GitHub
- Secure OAuth2.0 integration
- Clean and modular Django project structure
- Automatic user creation on first login
- Customizable login and redirect flows

Tech Stack:

- Backend: Django 4.x
- Authentication: django-allauth
- OAuth Providers: Twitter, GitHub
- Database: SQLite (dev)
- Frontend: HTML, Bootstrap
- Others: Python 3.x, pip, virtualenv

Setup Instructions:

1. Create and Activate Virtual Environment:

```
python -m venv myenv
```

2. source \myenv\Scripts\activate)

3. Install Dependencies:

```
pip install -r requirements.txt
```

4. Configure ADMIN :

admin/Social Applications=your_github_client_id

admin/Social Applications=your_github_client_secret

admin/Social Applications=your_twitter_api_key

admin/Social Applications=your_twitter_api_secret

5. Run Migrations:

```
python manage.py migrate
```

6. Create Superuser (optional):

```
python manage.py createsuperuser
```

7. Run Server:

```
python manage.py runserver
```

OAuth Setup Guide:

GitHub:

- GitHub Developer Settings -> New OAuth App
- Callback URL: <http://localhost:8000/accounts/github/login/callback/>

Twitter:

- Twitter Developer Portal -> New App
- Callback URL: <http://localhost:8000/accounts/twitter/login/callback/>

Django Configuration (settings.py):

```
INSTALLED_APPS = [..., 'django.contrib.sites', 'allauth', 'allauth.account',  
'allauth.socialaccount', 'allauth.socialaccount.providers.github',  
'allauth.socialaccount.providers.twitter']
```

```
SITE_ID = 1
```

```
AUTHENTICATION_BACKENDS = [  
    'django.contrib.auth.backends.ModelBackend',  
    'allauth.account.auth_backends.AuthenticationBackend',  
]
```

```
LOGIN_REDIRECT_URL = '/'
```

```
LOGOUT_REDIRECT_URL = '/'
```

NOTE:

All data fetching in this project is done using publicly available and free APIs from platforms like Twitter and GitHub. No paid APIs were used. I also attaching a video of Running project. I have removed all the essential keys, you have to add these keys to run the project
